

Agricultural Produce Management System

A centralized Oracle database solution connecting farmers, buyers, and employees across Rwanda's agricultural supply chain.

The Problem

1

Rwanda's agricultural sector lacks a centralized system to track produce from farmers to buyers.

4

No clear audit trail for produce collections and orders.

2

Farmers struggle to get fair prices and timely payments.

5

Manual record-keeping leads to errors and lost data.

3

Buyers have difficulty finding reliable produce sources.

Target Users & System Scope

TARGET USERS

Farmers

Register and track produce collections.

Employees

Record collections, manage inventory, process orders.

Buyers

Place orders and make payments.

Administrators

Monitor system, generate reports, ensure compliance.

SYSTEM SCOPE

Farmer registration and management

Produce collection tracking

Inventory management

Order processing

Payment recording

Audit logging

Business rule enforcement (weekend/holiday restrictions)

Objectives & Expected Benefits

PROJECT OBJECTIVES

- 1 Build a centralized database for agricultural produce management.
- 2 Automate produce collection and inventory tracking.
- 3 Provide real-time reporting on farmer performance.
- 4 Ensure data integrity with triggers and constraints.
- 5 Implement audit trails for security and compliance.

EXPECTED BENEFITS

-  Reduced manual errors
-  Faster order processing
-  Better farmer-buyer relationships
-  Transparent pricing and payments
-  Improved decision-making with reports
-  Compliance with business rules
